Video player apps for pc free download

Video streaming has taken over in a big way. Many people have Netflix, Hulu, VRV and even YouTube subscriptions as their primary video streaming services. However, there are still plenty of us with video files on our phones. Watching videos isn't nearly as hard as it used to be. Most video player apps can play the most popular video code books without problems. That is, unless you're using some weird codec. Even if you do, you still have plenty of options to look at it. Let's check out the best video player apps for Android! Kodi is a good option that we don't include on this list because it acts more like a media player. We have this list linked to the bottom of this article. AllCastArchos Video PlayerBSPlayerLocalCastMX PlayerPlex and Plex VRVLCVideo Player All FormatXenderStock video player appsAllCastPrice: Free / \$4.99AllCast is a video player that specializes in sending your locally stored content to your Chromecast, Roku, Apple TV, Xbox 360/One and other DLNA-compliant devices. It also supports other types of media in addition to videos. It's got a bit of a rough start, but it's quickly become one of the driest casting apps. The free version has a five-minute limit for content, while the pro version has no restrictions. You can also convert your Android device to an AllCast receiver (which can be thrown at) using the AllCast Receiver app. Archos Video PlayerPrice: Free/ \$0.99Archos is one of the more popular video player apps on Android. It supports most types of video files, including MKV, MP4, AVI, WMV, FLV, etc. along with different types of subtitle files such as SRT, SUB, ASS (yes, for real), SMI and others. Of course, there are other features, such as server and NAS support, external USB storage support, and more. The app also includes a relatively modern interface, simple controls, and information from sites like IMDb, themoviedb.org and others. In practice, we haven't found any real problems with it, although some Google Play reviewers do. In any case, it is a solid option with a cheap pro version. BSPlayerPrice: Free/\$5.99BSPlayer has existed longer than most video player apps and has continued to be one of the best in all that time. Contains multilingual hardware decoding, hardware accelerated playback, and streaming support from network (DLNA) devices. In addition, there is support for subtitles, the ability to play files from compressed formats, and you can even have a pop-up if you want. The free version supports ads, but it has all the features. There are also additional plows for even better support. The full version lasts for \$5.99.LocalCastPrice: Free with in-app purchasesLocalCast is a competitor to AllCast and perform many of the same functions. This includes streaming media from your device to Chromecast, Xbox 360/One, Roku, Fire Stick, or Apple TV. With AllCast, it enables streaming from cloud storage (Google Drive, Dropbox), and should work on most Device. It only has code books that Chromecast supports. It should be most of the main code guys these days, though. Despite this, it is one of only a few respectable video player applications that perform this function. MX PlayerPrice: Free/ \$5.99MX Player has long been one of the most popular video player apps. It supported multiple formats long before other video player apps thought it would and was also among the first to include things like hardware decoding, hardware accelerated playback, and other such features. It still has all these things along with motion controls (including pinch-to-zoom), subtitle support, a baby lock to get your kids on the app to watch their Disney movies, and supports almost every codec out there. Like MoboPlayer, it comes with additional add-ons to add more functionality if you need them. Plex and Plex VRPrice: Free/ \$4.99/\$4.99 per monthPlex is currently the best answer to the question of what to do if you have a lot of video and only 32GB of storage on your phone. Plex allows you to set up a server on your computer, and then it will stream content from your computer to your smartphone. It's a little unique from other video player apps, but it also doesn't require you to keep files on your device. This frees up valuable storage space for other things. The service is free to set up, the mobile app costs \$4.99, and you can get an additional \$4.99-a-month subscription to unlock all plex pass features. Plex VR takes it all the worse and allows you to use it on Google Daydream VR devices as well. VLCPrice: FreeVLC quickly rose to its name as one of the unfit video player apps. It has a number of unique features, including the ability to stream video if you have a URL. It can also play some opuscode video formats, such as DVD ISOs. Unlike most, it also has all its codecode built in without the need for additional plug-in downloads. Other features include subtitle support, full media support (including audio), multi-song audio, and more. There's also a beta in case you want to try the latest features. Video Player All FormatPrice: Free / \$3.99Video Player All formats is a basic application for video player. It's also a little diamond in the rough. It boasts support for most video codecases. Some of the other features include Chromecast support, night mode, privacy folder, and variable speed playback controls. It seems to tick all the right boxes during our testing. In addition, it can not boast of banner ads, although there are other places. You can unlock the ad-free version for \$3.99. It's definitely one of the weaker picks on our top ten, but it's still good enough to be here. XenderPrice: FreeXender is a combination of file and video player transfer app. You can share music and movies with people in your general vicinity without using cellular data. That way, the app can play most movies and music files without much difficulty. That makes it a decent option for that sort of thing, stuff, there is no advanced watch or playback control like many dedicated video player apps. It's a good one-two punch for those who need to share the media with their friends and then also watch or listen to those media. It's free and surprisingly popular. Your device is stock video playerPrice: FreeYour device is a stock video player has made great strides since the old days. These days, they'll play almost anything. You already have it in your app drawer. It already occupies storage and you usually can't get rid of it. You can at least try the old college. Android generally gets better and better video codec support every year, including HDR VP9 from Android Pie. OEMs usually put support for all this stuff in a stock video player. Some of them can even play streams like VLC. Anyway, give him a real punch before moving on to something else. This is usually the path of least resistance. If we missed any of the best video player apps for Android, tell us about them in the comments! You can also click here to check out our latest Android app and game lists! Downloading videos to Windows Media Player (WMP) allows you to upload them to supported players and other video apps. WMP mainly supports video formats such as Advanced Video Interleave (AVI) and WMV (Windows Media Video). Using a free and simple online video converter, download and convert your favorite online videos from some of the most popular video-sharing websites and upload them to your media player. Go to the video sharing site of your choice and start the video you want to play again. Copy the URL. Go to a free online video conversion website like Zamzar.com. This website allows you to download and convert online videos to Windows Media Player formats such as AVI and WMV. Click the Download Videos tab, and in the Conversion URL window, you are late for your previously saved URL. Select AVI or WMV from the Convert To window. Both formats are Windows Media Player formats. Type your e-mail address and click Convert. When the conversion is complete, the file is in WMV format and you are sent an email containing the video attachment. Sign in to your email account and open an email that contains a video attachment. Click Download Attachment and select the output folder to save it to your computer Download and install the latest Windows Media Player. Click the Windows Start button and click Windows Media Player to start the app when installation is complete. Click the File menu on the media player and click Open. Locate the converted AVI or WMV file from the output folder where you downloaded it, and click Open to load it to the media player. Gone are the days when watching a video required a TV and video cassette player or DVD player. Today, video streaming services like Netflix, Hulu or Amazon downloaded in a big way. In addition, better video formats and storage solutions have emerged, and many Now make 4K videos to turn your mobile device into a portable theater. If your device's stock video player doesn't display high-quality videos correctly, there are several Android video player apps you can replace it with. These video player apps let you get the features you need and improve your video viewing experience. The best Android video players AllCast AllCast is an Android video player app that works with streaming devices such as Chromecast, Apple TV, Roku, Xbox One/360, WDTV and other DLNA-compliant renderers. The app lets you stream content from your phone to your TV, monitor, or other larger screen instead of playing it on a tiny smartphone screen. You can use AllCast to stream other types of media such as photos and music from local or cloud storage. AllCast is available as a free app, with a five-minute limit for content. If you want to remove restrictions, you can buy a premium key for \$4.99 and enjoy watching videos on your phone. MX Player If you want the right balance of powerful features and ease of use, the MX Player is worth considering. The Android video player playback app supports multiple formats and offers features such as hardware-accelerated playback and hardware decoding. The viewer is simple and uncluttered with support for pinch-to-zoom and various finger-swiping gestures, subtitle gestures, multi-core decoding, and variable page ratio. The MX Player also has a baby lock so your children don't look at anything inappropriate. You can use the free MX Player or upgrade to the Pro version for \$5.99. VLC for Android VLC for Android is a full media player that can play any video and audio files, network drives and shares, network streams and DVD ISOs. The app has a number of features, including even filters. VLC also supports all video formats and codec, including MOV, AVI, MP4, MKV, FLAC, Ogg, AAC, TS, Wv and M2TS. In addition, the app supports closed captions, subtitles, Teletext, multi-song audio, automatic rotation, and gestures to control brightness, volume, and search. You can also stream a video from a URL. LocalCast LocalCast is a free Android video player playback app that lets you stream video, photos, and music to devices like Chromecast, Apple TV, Roku, and Fire Stick. The app lets you stream from on-site device storage or cloud storage. In addition, it supports streaming from connections and with most DLNA-compliant devices. If you don't like all the ads in the free version, you can upgrade to the Pro version and unlock features like local media search and video review. Plex If you have a lot of videos on your Android device and limited storage, Plex is a pretty good video player app to use. You can set up a server on your computer Use Plex to stream content to a mobile device, thus turning the device into a powered power source. The app also sorts your media files into a library so you can stream to a smart TV or mobile device. Plex is free to set up and use, but you can upgrade to Plex Pass subscription and access features such as wireless sync, media management dashboard, trailers, and user controls. BSPlayer App BSPlayer plays the most popular video formats and supports streaming from DLNA devices. The video player playback app includes hardware accelerated playback, software decoding, and multilingual hardware decodes, original subtitle support, and can play files from compressed formats. Not only that, BSPlayer also offers support for a swipe gesture, and you can customize the interface using a variety of skins. You can also use pop-up viewer to watch videos in the window above other apps on your device. The free version supports the app, but you can access all the features. The full ad-free version offers additional functionality, including Chromecast support, multiple audio streams and subtitles, and a lock screen (lock for kids). Video Player All Format Video Player All Format (XPlayer) is a basic application for playing an Android video player with 4K playback, ultraHD, wide format support and Chromecast support, motion controls. The app includes useful plugins such as variable speed playback controls from. 25x to 4x, night mode, and gesture controls. You can also create a video playlist and add your favorite videos to it, zoom in, find, and delete video files, or edit them with a video slicer. If you're a multitasker, you can watch videos in a pop-up or play videos in the background while doing something else. The app is supported with additional support, but for as little as \$3.99, you can unlock an ad-free version and view videos without distractions. Kodi Kodi is a popular video streaming app that is loaded with features to help you turn your Android device into a portable media hub. The app doesn't contain any content, but you can access videos from local storage or cloud storage. In addition, Kodi gives you access to content available on the content provider's website using third-party plugins or plugins like YouTube, PopcornFlix, Crackle, and more. Protect your privacy with a virtual private network (VPN). A VPN encrypts your data so that internet snoopers and hackers can't steal your personal information. Improve your video viewing experience with the right Android video player app, you won't have to worry about downloading more plugins or codecases to enjoy your favorite TV shows, music, or movies. These 8 video player apps eliminate all hassles and come down to playing videos. Did your favorite Android video player app make a list? Tell us about it in the comments. Comments.
